Oil wax skin

Oil wax leather is a kind of cowhide leather making process, which needs to be separated from the ordinary cowhide production process in the water plant process. The main difference is the tanning stage, ordinary cowhide mainly uses chrome tanning, vegetable tanning, aldehyde tanning, etc. Oil wax skin is used oil tanning, after leather tanning and dyeing, the leather is soft, good elasticity, good air permeability, large tension. At the same time, the vacuum drying process in the process makes the oil wax skin also have the characteristics of not easy to mildew.

It has strong water and oil absorption, and the color of the skin surface will become darker when it sticks to the part after water and oil. In fact, it is these characteristics of oil wax skin that make it give people a feeling of nostalgia and vicissitudes. When the leather is stretched, there will be a change in color, and such products are more prone to scratches when scratched by hand, which is also the most special point of oil wax skin.

FAB

Mesh		FAB	
F	feature	A advantage	B benefits)
1	Genuine leather lamp shade	with a certain degree of protection	easy to deform and durable
2	3000k 3000k warm yellow light	Give a warm, relaxed feeling	easy to put people into a relaxed state
